GSHA Conference
February 2014

www.amacusg.org

Agenda

- Welcome to the Assistive Technology revolution! The world around us is evolving at an astounding rate. Assistive Technology developments have been foundational in this evolution and a catalyst producing positive life-changing results for individuals with disabilities. This talk will present what's new in AT and in the AT community as we explore where we were, where we are, and perhaps, where we are going. Possible solutions to expedite knowledge transfer from research journals to your clients whether they are school, at home, at work, or in the community will also be discussed.

Financial Disclosures: None

Non- Financial Disclosures: None

Why Am I Here Today?

- Master Our Skills!
- Expand Our Knowled
- Build Stronger Schoo

Hope begins in the dark, the stubborn hope that if you just show up and try to do the right thing, the dawn will come.

~Anne Lamott

AMAC

AMAC Accessibility is a social change organization on a mission to create affordable services for governmental, private and non-profits organization working with individuals with disabilities. Services include e-text, braille, captioning, assistive technology, office management software and consulting.

Accessibility Made Smart

AMAC creates practical solutions that work, with a focus on utility, ease of use, and high quality.

- **Accessibility Consulting** focuses on organizational accessibility needs with evaluation, technical assistance, customer support, and website accessibility solutions.
- **Braille Services** produces customized projects from both print materials and electronic text including partial books and chapters or graphics only using cutting-edge technology.
- **Captioning Services** makes classrooms, meetings, labs and other audio environments fully accessible for deaf or hard-of-hearing.
- **Professional E-Text Producers** provide high-quality e-text in many formats such as PDF, DOC, DAISY, and HTML.
- **Certified Assistive Technology team** provides on-site and remote assessments, demonstrations, training and technical assistance for education, work, and daily living environments.

For more information, please visit our website at www.amacusg.org

Tools for Life Mission

We're here to help Georgians with disabilities gain access to and acquisition of assistive technology devices and assistive technology services so they can live, learn, work, and play independently in the communities of their choice.
# Tools for Life
Georgia's Federal AT Act Program

- TFL developed Georgia's Plan for AT
- We serve individuals of all ages & all disabilities in Georgia
  - Over 50,000 thru various activities throughout the year
- TFL Network
  - Assistive Technology Resource Centers
  - Lending Libraries
  - Training and Demonstrations
  - AT Reuse
  - AT Funding Education/Assistance and Resources
- Online Resources
  - www.gatfl.org - 12,000 unique visitors a month

Welcome to Tools for Life

Tools for Life, Georgia's Assistive Technology Act Program, is dedicated to increasing access to and acquisition of assistive technology (AT) devices and services for Georgians of all ages and disabilities so they can live, learn, work and play independently and with greater freedom in communities of their choice.

Tools for Life and the TFL Network work collaboratively together to accomplish our mission through:

- AT Demonstration
- AT Evaluations and Assessments
- AT Funding Options & Education
- Access to the TFL AT Lending Libraries
- AT & Durable Medical Equipment Reuse
- AT Training (Individual)
- AT Training (Groups)

Please take our survey to help us gather information that will help better serve the community. The survey can be found at:

Looking Back to See Forward…

In 1990, the internet was something used by fantasy baseball fanatics on CompuServe and mobile phones were the size of toddlers — a luxury for those who could afford to not use pay phones. Satellite TV meant having a massive dish on your property; millions struggled with programming their VCRs to tape L.A. Law; bills were paid by check... in the mail.

By Chris Morran

Emerging Trends

Knowledge transfer is the practical action of transferring knowledge from one organization to another. Like knowledge management, knowledge transfer seeks to organize, create, capture or distribute knowledge and ensure its availability for future users.

TIP: Universities & Colleges are becoming more agile and actively seeking avenues for Knowledge Transfer.

Wikipedia

Assistive Technology Research: 20 Key Articles

Dave Edyburn, Ph.D. (edyburn@uwm.edu)

University of Wisconsin – Milwaukee
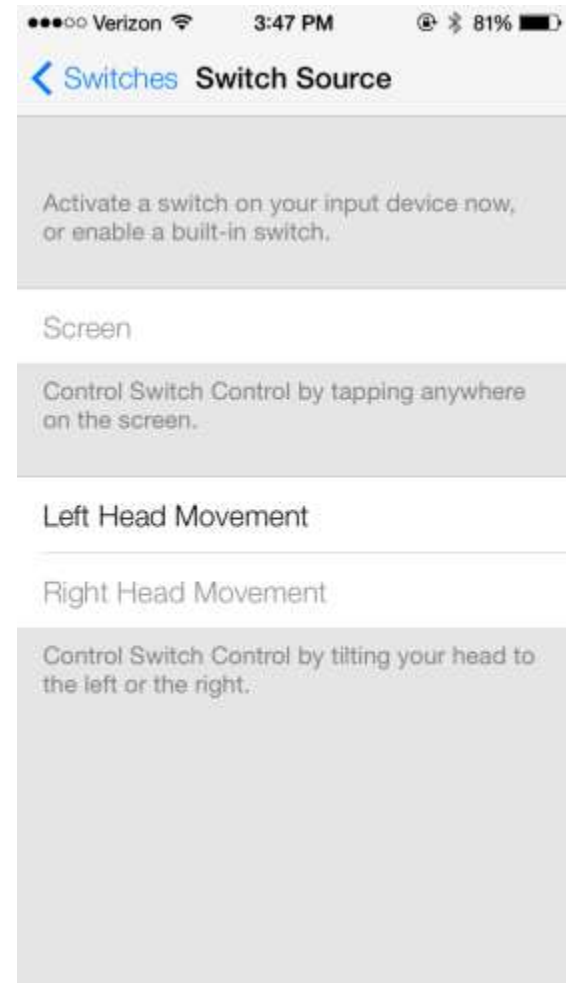

January 30, 2014, ATIA, Orlando, FL

Description

Educators, researchers, and developers are increasingly expected to utilize evidence-based practices in the context of interventions used with individuals with disabilities. The purpose of this presentation is to provide an overview of 20 key articles that could form the basis of a reading list or primer on the effectiveness of assistive technology. As an outcome of this presentation, it is expected that participants will gain insight into model research studies that they can use when designing their own assistive technology research. Perhaps more importantly, it is anticipated that the primer will provide the basis of a collegial study group so that organizations can enhance their individual and collective understanding of assistive technology interventions that are evidence-based.

App Factory (D1)

The overall purpose of this project is to advance universal design in the wireless community. The objectives of this project are development, deployment, and adoption of software applications ("apps") to enhance the utility and usability of wireless products and services for wireless customers with and without disabilities.

App Factory output will include apps designed specifically to address barriers to wireless access and use by people with cognitive, physical, sensory, and/or speech disabilities. Wherever practical, these apps will incorporate features useful to all customers, with or without disabilities.

A complementary objective of this project is development of a practical model for consumer participation in the process of app development. This process engages the community of people with disabilities throughout the process of envisioning, designing, testing, refining, and disseminating applications.

E-Readers Can Make Reading Easier for Those With Dyslexia

Sep. 18, 2013 — As e-readers grow in popularity as convenient alternatives to traditional books, researchers at the Smithsonian have found that convenience may not be their only benefit. The team discovered that when e-readers are set up to display only a few words per line, some people with dyslexia can read more easily, quickly and with greater comprehension. Their findings are published in the Sept. 18 issue of the journal *PLOS ONE*.

An element in many cases of dyslexia is called a visual attention deficit. It is marked by an inability to concentrate on letters within words or words within lines of text. Another element is known as visual crowding--the failure to recognize

How Emotions Are Mapped in the Body

Dec. 31, 2013 — Researchers found that the most common emotions trigger strong bodily sensations, and the bodily maps of these sensations were topographically different for different emotions. The sensation patterns were, however, consistent across different West European and East Asian cultures, highlighting that emotions and their corresponding bodily sensation patterns have a biological basis.

Different emotions are associated with discernible patterns of bodily sensations. (Credit: Image courtesy of Aalto University)

"Emotions adjust not only our mental, but also our bodily states. This way the prepare us to react swiftly to the dangers, but also to the opportunities such as pleasurable social interactions present in the environment. Awareness of the corresponding bodily changes may subsequently trigger the conscious emotional sensations, such as the feeling of happiness," tells assistant professor Lauri Nummenmaa from Aalto University.

"The findings have major implications for our understanding of the functions of emotions and their bodily basis. On the other

THE NEW YORK TIMES AND INTERNATIONAL

THE NEW YORK TIMES:
"The power of positive thinking finally gains scientific credibility. Mind-bending, miracle-making, reality-busting stuff...with implications for all human beings, not to mention human culture, human learning and human history."

OLIVER SACKS, MD:
"Fascinating. Doidge's book is a remarkable and hopeful portrait of the endless adaptability of the human brain."

THE LONDON TIMES:
"Brilliant...Doidge has identified a tidal shift in basic science...The implications are monumental."

V.S. RAMACHANDRAN, MD, PHD:
"Superb. Brilliant. I devoured it."

ABOUT THE BOOK

THE BRAIN CAN CHANGE ITSELF. It is a plastic, living organ that can actually change its own structure and function, even into old age. Arguably the most important breakthrough in neuroscience since scientists first sketched out the brain's basic anatomy, this revolutionary discovery, called neuroplasticity, promises to overthrow the centuries-old notion that the brain is fixed and unchanging. The brain is not, as was thought, like a machine, or "hardwired" like a computer. Neuroplasticity not only gives hope to those with mental limitations, or what was thought to be incurable brain damage, but expands our understanding of the healthy brain and the resilience of human nature.

Norman Doidge, MD, a psychiatrist and researcher, set out to investigate neuroplasticity and met both the brilliant scientists championing it and the people whose lives they've transformed.

Identifying Strategies to Keep Older Adults Healthy in Senior Living Communities

Contact Person: **Sara McBride**

Many older adults choose to make the transition into senior living communities, such as independent living or assisted living. We are interested in understanding the types of strategies used and decisions made by staff in these types of communities that are aimed at supporting residents' health. By identifying these processes, we may be able to improve training or design decision support systems that could facilitate portions of the decision making process.

CASE STUDY

Product Testing Network: Georgia Tech Launches HomeLab to Help Companies Evaluate In-Home Use of Emerging Health Technologies

Baby boomers have witnessed many technological innovations, and they expect technology to provide them with solutions to help maintain their independence for as long as possible. They are outfitting their homes with products to help them live healthy lifestyles, manage chronic conditions, remember to take medications and remain connected with their caregivers.

To help companies evaluate baby boomers' perceptions, use and acceptance of home health and wellness technologies, the Georgia Institute of Technology has launched HomeLab. HomeLab is a statewide network of adults 50 years of age and older recruited to evaluate the in-home usability and effectiveness of consumer products designed for the aging adult population.

HomeLab currently consists of 100 homes distributed throughout the state of Georgia; the network is expected to grow to 150 homes later this year and 550 homes by 2014.

acceptance. Contexts for the discussion will include aging-in-place and health care.

Presentation 2: Human-Robot Interaction: The Potential to Support Successful Aging

Philips iCat

GATSBII-Georgia Tech Service Bot with Interactive Intelligence

There is much potential for robots to support older adults in their goal of independent aging. However, for human-robot interactions to be successful, the robots must be designed with user needs in mind.

In the Human Factors and Aging Laboratory, Roger's lab is conducting research in the nascent field of older adult–robot interactions. In this presentation, Rogers will provide an overview of the needs, capabilities, preferences, and limitations of older adults. She will then discuss our current and planned research on the design of robots to support older adults and health care providers. Our focus is on understanding the interactions among user characteristics, robot characteristics, and the context of the interactions (e.g., task demands).

Presentation 3: Aware Home Technology to Support Aging-in-Place

Aware Home at Georgia Tech

Imagine if your home were "aware" of your activities so that it might help you remember what it was you went into the kitchen for or whether the visitor at the front door is someone you know or even what the proper procedure is for performing a recently learned home medical procedure. An aware home is not from the world of science fiction—it is within the realm of science. Such technological developments have the potential to enable older adults to maintain their functional independence and to "age-in-place." They also have the potential to support families caring for children with developmental disabilities or individuals recovering from illness or injury. An innovative research program at Georgia Institute of Technology is focused on developing psychological and computer science to support home activities.

The presentation will include examples of health care technology, communication technology, and memory supports. These examples demonstrate the complexity of the issues involved in designing the computationally capable home of the future and provide direction for future research and development efforts.

Products and Services

VGo is an all-in-one solution that includes everything you need to establish your physical presence in a distant location.

With the VGo solution, an individual's presence is replicated in a distant location such that they can interact and perform their job in ways not previously possible. Now they can see, be seen, hear, be heard and move around in any remote facility –just as if they were there. VGo will enable businesses to increase productivity of remote and travelling employees, healthcare providers to deliver lower cost services and improved quality of care, and homebound students to attend school – all with a great user experience and at an affordable price.

What is VGo?

How does it work?

How does it compare?

VGo Telepresence Robot

- Enables a person to replicate themself in a distant location and have the freedom to move around as if they were physically there

Groundbreaking study finds children with autism hear and see out of sync JANUARY 15, 2014

Adaptive Robot-Mediated Intervention Architecture (ARIA)

- "NAO has been programmed with a series of verbal prompts, such as "look over here" and "let's do some more," and gestures such as looking and pointing at one of the displays, that imitate the prompts and gestures that human therapists use in joint attention training."

- The protocol begins with a verbal prompt that asks the child to look at an image or video displayed on one of the screens.

- If the child doesn't respond, then the therapist provides increasing support by combining a verbal prompt with physical gestures such as turning her head or pointing.

- When the child looks at the target then the therapist responds with praise, such as telling the child, "good job."

Adaptive Robot-Mediated Intervention Architecture (ARIA)

- "One of the key elements of ARIA is its closed loop design. The robot adapts its behavior to each child automatically depending on how he or she is responding. The cost of robotic systems like this will continue to come down in the future so it should easily pay for itself by supplementing human intervention."

- "In addition, ARIA is not designed to replace human therapists, who are in short supply, but to leverage their efforts. "A therapist does many things that robots can't do," said Sarkar. "But a robot-centered system could provide much of the repeated practice that is essential to learning.

- This research was supported by a Vanderbilt University Innovation and Discovery in Engineering and Science (IDEAS) grant, National Science Foundation award 0967170, National Institutes of Health award 1R01MH091102-01A1 and by the Meredith Anne Thomas Foundation.

Access4Kids: Tablet Computers and Children with Disabilities

December 10, 2012 — Ayanna Howard, a Georgia Tech professor of electrical and computer engineering, and Hae Won Park, a Georgia Tech graduate student, have developed and created Access4Kids with the goal of helping children with limited mobility, "giving them the ability to use what's in their mind so they have an outlet to impact the world." Access4Kids is a wireless input device that utilizes a sensory system to measure pressure, which translates a child's physical movements into fine-motor gestures that enables them to control and interact with a tablet computer. The current model of the device can be worn on the forearm or the arm of a wheelchair and the child uses their fist to hit the sensors. However, Howard is working on the development of a second prototype with wireless sensors that could be placed in any location the child is capable of hitting. The device has received positive feedback from children and has also received recognition within the industry, as the device was a finalist in a recent Intel-sponsored competition and was demonstrated to and received well by the British Consulate before the Paralympic Summer 2012 games. Access4Kids could significantly impact the lives of those children with an orthopedic disability by providing them the ability to use tablet computers and other touch screen devices they have, up to this point, been barred access.

The Device:

Access4Kids is a unique assistive input device that enables access to rehabilitation apps for children with limited upper-body motor control. The wireless device utilizes a sensor system that translates any physically possible body press/swipe movements into fine-motor control gestures. Access4Kids, coupled with a supporting software library, enables control of off-the-shelf apps or control of custom-made apps to facilitate the delivery of effective therapy opportunities for children lacking fine motor skills.

Electronic Sensors Printed Directly on the Skin

New electronic tattoos could help monitor health during normal daily activities.

By Mike Orcutt on March 11, 2013

Electronic tattoo. The image shows a colorized micrograph of an ultrathin mesh electronic system mounted on a skin replica.

Taking advantage of recent advances in flexible electronics, researchers have devised a way to "print" devices directly onto the skin so people can wear them for an extended period while performing normal daily activities. Such systems could be used to track health and monitor healing near the skin's surface, as in the case of surgical wounds.

So-called "epidermal electronics" were demonstrated previously in research from the lab of John Rogers, a materials scientist at the University of Illinois at Urbana-Champaign. the devices consist of ultrathin electrodes, electronics, sensors, and wireless power and communication systems. In theory, they could attach to the skin and record and transmit electrophysiological measurements for medical purposes. These early versions of the technology, which were designed to be applied to a thin, soft elastomer backing, were "fine for an office environment," says Rogers, "but if you wanted to go swimming or take a shower they weren't able to hold up." Now, Rogers and his coworkers have figured out how to print the electronics right on the skin, making the device more durable and rugged.

Skin signals. This device, applied directly to the skin, can record useful medical information.

"What we've found is that you don't even need the elastomer backing," Rogers says. "You can use a rubber stamp to just deliver the ultrathin mesh electronics directly to the surface of the skin." The researchers also found that they could use commercially available "spray-on bandage" products to add a thin protective layer and bond the system to the skin in a "very robust way," he says.

Eliminating the elastomer backing makes the device one-thirtieth as thick, and thus "more conformal to the kind of roughness that's present naturally on the surface of the skin," says Rogers. It can be worn for up to two weeks before the skin's natural exfoliation process causes it to flake off.

During the two weeks that it's attached, the device can measure things like temperature, strain, and the hydration state of the skin, all of which are useful in tracking general health and wellness. One specific application could be to monitor wound healing: if a doctor or nurse attached the system near a surgical wound before the patient left the hospital, it could take measurements and transmit the information wirelessly to the health-care providers.

Google announces Calico, a new company focused on health and well-being

MOUNTAIN VIEW, CA – **September 18, 2013** – Google today announced Calico, a new company that will focus on health and w in particular the challenge of aging and associated diseases. Arthur D. Levinson, Chairman and former CEO of Genentech and C Apple, will be Chief Executive Officer and a founding investor.

Announcing this new investment, Larry Page, Google CEO said: "Illness and aging affect all our families. With some longer term, thinking around healthcare and biotechnology, I believe we can improve millions of lives. It's impossible to imagine anyone better Art—one of the leading scientists, entrepreneurs and CEOs of our generation—to take this new venture forward." Art said: "I've d much of my life to science and technology, with the goal of improving human health. Larry's focus on outsized improvements has me, and I'm tremendously excited about what's next."

Art Levinson will remain Chairman of Genentech and a director of Hoffmann-La Roche, as well as Chairman of Apple.

Commenting on Art's new role, Franz Humer, Chairman of Hoffmann-La Roche, said: "Art's track record at Genentech has been and we see an interesting potential for our companies to work together going forward. We're delighted he'll stay on our board."

Tim Cook, Chief Executive Officer of Apple, said: "For too many of our friends and family, life has been cut short or the quality of t too often lacking. Art is one of the crazy ones who thinks it doesn't have to be this way. There is no one better suited to lead this I am excited to see the results."

The
Writers
Brigade

Activities

The Writers Brigade (WB) operates under a two-fold mission: enhancing employability for adults who depend on assistive technology (AT) and publicizing the activities of the AAC-RERC. Participants in the WB will gain professional experience in writing and publishing articles that disseminate research in the field of AAC and AT.

David McNaughton and Pamela Kennedy are now implementing the AAC-RERC Writers Brigade. It was conceived of by staff at ACI in 2003 as a knowledge translation tool for the AAC-RERC and in response to findings that people with complex communication needs often are unemployed or underemployed. From 2003-2008, Johana Schwartz served as project manager and Sarah W. Blackstone as project director. Eleven individuals participated successfully and accrued more than 100 citations over four years. They developed a Guide to enable others to replicate and adapt the program to meet the needs of their own organizations/entites. For a free, downloadable copy of the Guide,**click here**.

Newsletter Archive

Welcome

For over twenty years (1988-2009) Sarah Blackstone wrote and published the leading international newsletter in *Augmentative Communication, Augmentative Communication News (ACN)*, distilling the ongoing research, exemplary practice, and new development activities in the field into a practical format that made it possible for clinicians, students and teachers to translate ongoing research and development into immediate practice. For fifteen years (1994-2009) Michael B. Williams, a gifted writer who himself relies on augmentative communication tools and strategies, wrote, edited, and oversaw the publications of *Alternatively Speaking*. This newsletter was written by and for people with complex communication needs and covered topics of personal and immediate interest to individuals who benefit using AAC.

Every single issue of these two seminal publications in the field of AAC is now available (AT NO COST) to anyone who wishes to read and download them.

Augmentative Communication Online User's Group (ACOLUG) is an Internet Listserv that allows users of augmentative communication and their families to communicate with each other and with professionals and students who are interested in augmentative communication. ACOLUG enables people who are separated by great geographic distances to "meet" and communicate with each other in a way that is convenient, comfortable and free!

ACOLUG, now in its 20th year has a diverse membership of more than 800 people from all states, Puerto Rico, the Virgin Islands, and Guam, and from 16 countries. The membership is primarily individuals who use augmentative communication ranging in age from 7 years old to mature adults. Family members also play a key role on ACOLUG

Conference 2014

The 16th Biennial Conference of ISAAC will be held from July 19-24, 2014, at the Lisboa Congress Centre, Lisbon, Portugal. Pre-conference Workshops will be scheduled on July 19-20; the AAC Camp will be on July 19-20; and the Main Conference will be held from July 21 to 24. The Research Symposium will be immediately following the Main Conference, on July 25-26.

Join us in Lisbon for keynotes, exhibits, workshops, social events, seminars, the AAC Camp and the Research Symposium – everything you have come to expect from an ISAAC conference, and more. Enjoy the history and culture of the "City of Light", in the company of old friends and new.

The ISAAC Biennial Conference program offers something for everyone with an interest in AAC. Presentations feature leading edge research, and clinical and educational interventions and innovations. People who use AAC share their experiences and perspectives. Posters focus on a wide range of topics, and the Exhibition showcases new technologies or applications of technology, products and services.

People who use AAC, individuals from emerging AAC nations (BUILD) and emerging researchers are eligible for travel grants. Details on the Awards and Scholarships page.

Awareness Month

Archive material

October 2013 Events

AAC Awareness events were held around the world to celebrate International AAC Awareness Month. A few examples are as follows:

- ISAAC-Francophone reports here (in English, PDF 27 MB) and here (in French, PDF 27 MB) on October 2013 AAC Awareness activities in France. In addition, please see the Caa Francophone page on Facebook.

- The 24 Hour Non Speech Challenge means not talking, voluntarily, for 24 hours. During that time, only alternative means of communication, such as writing, symbols, gestures, applications, etc. can be used. By attempting this challenge, you will help the general public understand the impact of using AAC in daily life and the obstacles faced every day.

- The Silent Morning Tea on October 1st, sponsored by Scope in Victoria, Australia, to raise awareness of the different ways of communicating with others.

- ISAAC Canada chose Thursday, October 3rd to be AAC Awareness Day. They will be sharing events from around the country on Facebook.

- Coffee Shop Communication Challenge on October 12th, in Hamilton, Canada.

- A Twitter Chat using the tag #AACaware on October 14th. Check out ISAAC Australia's blog for more information.

Participate in the 24 Hour Non Speech Challenge

The 24 Hour Non Speech Challenge means voluntarily not talking for 24 hours. During that time, only alternative means of communication, such as writing, symbols, gestures, applications, etc. can be used. By attempting this challenge, you will help the general public understand the impact that a communication handicap has on our daily lives and the obstacles that a person who cannot talk faces every day. Let us salute their courage and that of their families. Show your support by sharing their lifelong situation for one day.

Take the challenge

Communicate with me!

Participant Kit

Presentation card

Present that card to the people you will meet during your challenge, to let them know why you are not speaking and to explain what the 24h Non Speech Challenge is all about.

When once you have tasted flight, you will forever walk the earth with your eyes turned skyward, for there you have been, and there you will always long to return.
